23rd March 2018

Otley Leg Club launch

BSN medical have been have worked in partnership with the Lindsay Leg Club Foundation for many years and been a key participant in the opening of the **FIRST Leg Club in the north of England.**

Support began with a road trip with BSN medical and a team of Otley based nurses to an established Leg Club in Powys. During the long drive our partners at BSN medical with the Otley team discussed the benefits of a Leg Club and how it can help address the growing case load the nurses are facing in the community and in their practices.

Meeting the members and clinicians at the Leg Club in Powys the team from Otley could see for themselves the sense of community which is created in the Club - empowering members to take ownership of their own care and address the social isolation associated with living with a leg ulcer.

Things then moved quickly, what was started by a passionate practice nurse soon was a team of CCQ representatives and the operational lead for community nursing. BSN medical supported with data on outcomes and hospital admissions and provided an insight as a Leg Club Industry Partners. Opening day in Otley was the 7th March with nearly 25 new members attending.

BSN medical supporting patients clinicians every step of the way
